

Care of the very preterm baby after discharge home

Neena Modi Professor of Neonatal Medicine Imperial College London

- When do babies go home?
- What issues concern parents?
- What to assess at follow-up visits?
- What risks to be aware of?

Neonatal unit responsibilities

- Thermoregulation
- Respiratory stability
- Feeding skills
- Immunisations
- Parental readiness

When do babies go home?

Estimating neonatal length of stay for babies born very preterm Arch Dis Child Fetal Neonatal Ed 2018 Mar 27

Sarah E Seaton, ¹ Lisa Barker, ² Elizabeth S Draper, ¹ Keith R Abrams, ¹ Neena Modi, ³ Bradley N Manktelow, ¹ on behalf of the UK Neonatal Collaborative

Gestational age (completed weeks)	Median (interquartile range) for length of stay of survivors (days)	Median (interquartile range) for corrected gestational age at discharge (weeks)
24	123 (104, 139)	41.6 (38.9, 43.9)
25	107 (88, 125)	40.3 (37.6, 42.9)
26	92 (74, 109)	39.1 (36.6, 41.6)
27	79 (63, 96)	38.3 (36, 40.7)
28	66 (52, 82)	37.4 (35.4, 39.7)
29	53 (43, 66)	36.6 (35.1, 38.4)
30	42 (34, 52)	36.0 (34.9, 37.4)
31	34 (28, 41)	35.9 (35, 36.9)

What to check at follow-up visits

- A summary of the baby's hospital stay
- A plan for specialist assessments
- General health, growth and development; blood pressure
- Immunisations
- Family functioning

Common questions and concerns

- Bathing and washing
- Skin care
- Constipation
- Gastro-oesophageal reflux
- Colic
- Going out and about
- Growth
- Supplements
- Correcting for gestational age

Reducing the risk of cot death

- Lie your baby on his/her back to sleep
- Use lightweight covers
- Make sure no one smokes in the house
- Keep your baby in your room for the first six months
- Never fall asleep with your baby on the sofa or in your bed, especially if you're very tired
- Make sure your baby rests well away from radiators or heaters and out of direct sunlight
- Keep the room at around 18°C (64°F)

Guide to vaccines for children under two years of age who were born prematurely

Most vaccines are given as an injection in the thigh or upper arm. Rotavirus vaccine is given as drops to be swallowed.

When	Diseases protected against	Vaccine given	
Eight weeks	Diphtheria, tetanus, pertussis (whooping cough), polio, Haemophilus influenzae type b (Hib) and hepatitis B	DTaP/IPV/Hib/ Hep8	
	Pneumococcal (13 serotypes)	Pneumococcal conjugate vaccination (PCV)	
	Meningococcal group B (MenB)	Men8	
	Rotavirus gastroenteritis	Rotavirus	
Twelve weeks old	Diphtheria, tetanus, pertussis, polio, Hib and hepatitis B	DTaP/IPV/Hib/ HepB	
	Rotavirus	Rotavirus	
Sixteen weeks old	Diphtheria, tetanus, pertussis, polio, Hib and hepatitis B	DTaP/IPV/Hib/ HepB	
	Pneumococcal (13 serotypes)	PCV	
	MenB	MenB	
One year old *on or after the child's first birthday	Hib and MenC	Hib/MenC	
	Pneumococcal	PCV	
	Measles, mumps and rubella (German measles)	MMR ¹	
	MenB	MenB booster	

¹ Contains porcine gelatine.

Further information

A guide to immunisations up to one year of age contains more detailed information about the routine childhood immunisation programme. Ask your health visitor for a copy if you were not given one soon after the birth of your baby.

From two years onwards, children born prematurely should continue to follow the normal schedule see the leaflets Pre-school immunisations – a guide to vaccinations at three and four months of age and Immunisations at secondary school – your questions answered.

Early intervention programmes for preterm infants have a positive influence on cognitive outcomes with benefits persisting into preschool age

Exclusive breast-feeding

- Requires strong, proactive health professional support
- Breast-feeding, not feeding expressed breast-milk
- Feeding expressed breast-milk reduces ability of infant to self-regulate intake
- No evidence to support fortification of breast-milk, or nutrient-enriched formula

Cochrane Database of Systematic Reviews

Multinutrient fortification of human breast milk for preterm infants following hospital discharge

Cochrane Systematic Review - Intervention | Version published: 28 February 2013

Lauren Young | Nicholas D Embleton | Felicia M McCormick | ₩ William McGuire

No evidence that feeding preterm infants with multi-nutrient fortified breast milk following hospital discharge is beneficial

Cochrane Database of Systematic Reviews

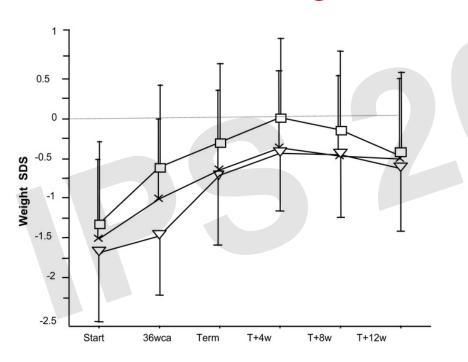

Nutrient-enriched formula versus standard formula for preterm infants following hospital discharge Lauren Young | Nicholas D Embleton | ■ William McGuire

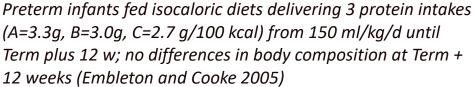

Cochrane Systematic Review - Intervention | Version published: 13 December 2016

Recommendations to prescribe 'post discharge formula' for preterm infants after hospital discharge not supported by available evidence.

Preterm babies self-regulate their intake

Encourage suckling, not pumping

How should expressed breast milk be stored?

- Domestic fridge (4°C)
 4 days
- Compartment freezer (-15°C)
 weeks
- Stand-alone freezer (-20°C)
 6-12 months

No evidence to recommend hydrolysed, nutrient enriched, or LCPUFA supplemented formulas

Cochrane Database of Systematic Reviews

Protein hydrolysate versus standard formula for preterm infants

Cochrane Systematic Review - Intervention | Version published: 02 October 2017

Derek Hang Cheong Ng | Joel Klassen | Nicholas D Embleton | William McGuire

No strong or consistent evidence that feeding preterm infants with hydrolysed rather than standard formula has benefits or reduces harms

Cochrane Database of Systematic Reviews

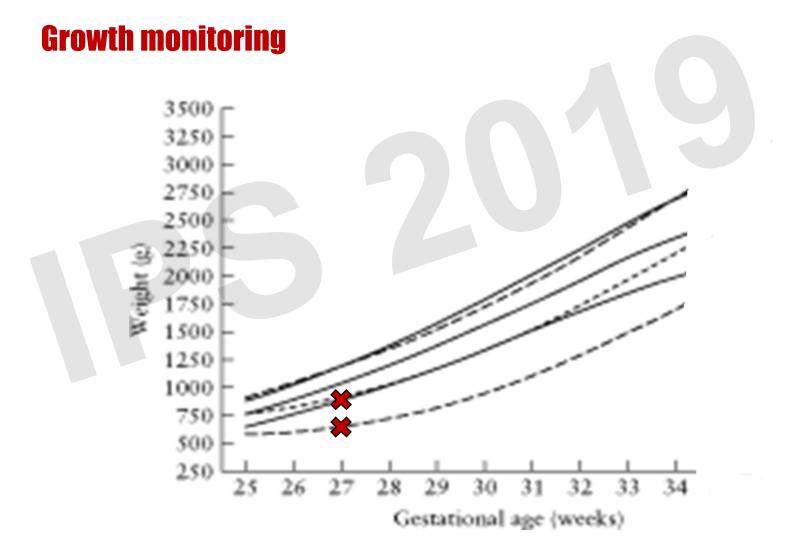

Longchain polyunsaturated fatty acid supplementation in preterm

infants Kwi Moon | Shripada C Rao | Sven M Schulzke | Sanjay K Patole | 🚾 Karen Simmer

Cochrane Systematic Review - Intervention | Version published: 20 December 2016

No clear long-term benefits or harms for preterm infants receiving LCPUFA-supplemented formula

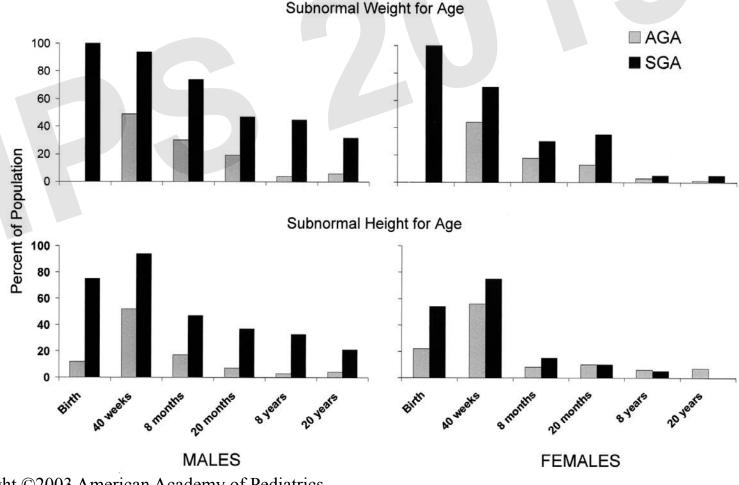

Estimated fetal weight (solid lines) and actual birth-weight reference range (dashed lines)

Majority of preterm infants reach population norm for height and weight Hack et al Pediatrics 2003

Percentage of AGA or SGA (less than -2 SD) very low birth weight infants with subnormal weight or height for age at birth, 40 weeks, 8 months, 20 months, 8 years and 20 years

Growth

- Most very preterm babies will reach population norms by young adult life
- Preterm babies at greater risk of all features of the metabolic syndrome in adult life
- Overweight will amplify these risks
- If growth velocity is stable, and the child is well, do not worry about small size
- Sustained parent reassurance is important

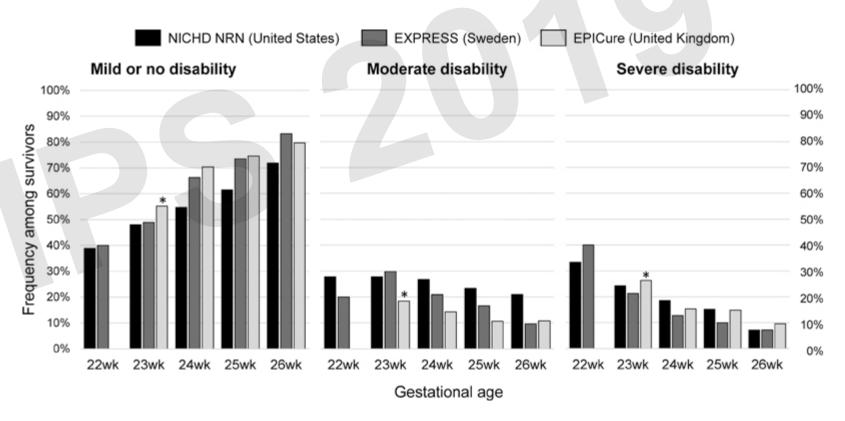

Respiratory morbidity

- Around 30% of infants born <32 weeks gestation) are hospitalised with respiratory problems (mainly infections) in their first 2 years
- Increase in respiratory problem even in infants without bronchopulmonary dysplasia
- Risk of childhood wheezing is 3 times higher
- Respiratory signs often treated as asthma though pathophysiological patterns are different
- Respiratory symptoms, impairment in lung function and radiological abnormalities persist through childhood into adult life
- Vaccine hesitancy, air pollution and smoking are major concerns
- Future research should focus on characterising respiratory funcational abnormalities and targeting treatment accordingly

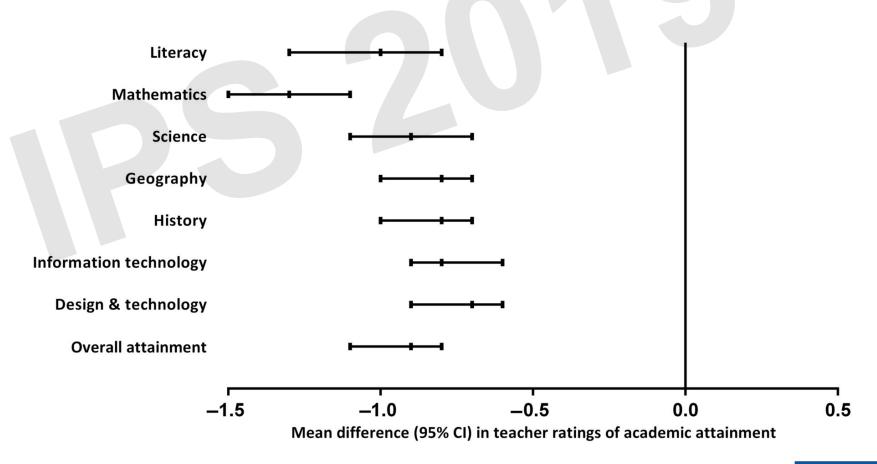

Disability in extremely preterm survivors: international cohorts

The spectrum of disability among surviving extremely preterm infants. Characteristics of the data sources are shown in *Estimates reported for infants ≤ 23-week gestational age.|

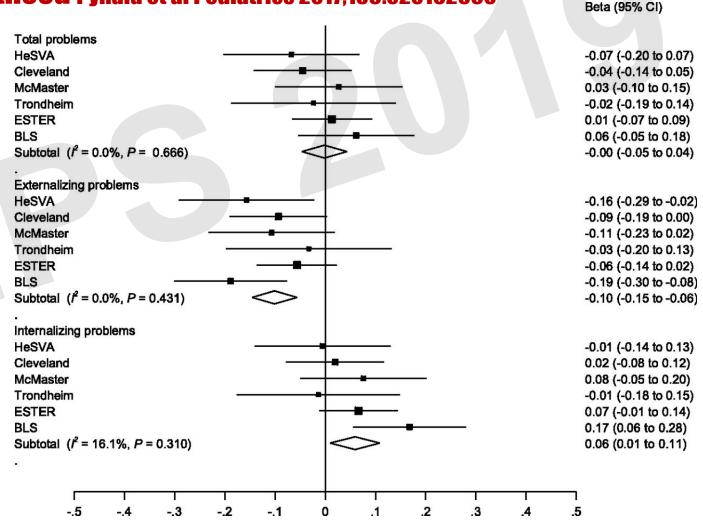

Teacher ratings of academic attainment in extremely preterm children (<26 weeks gestation) compared with term-born controls at age 11 years Johnson and Marlow 2017

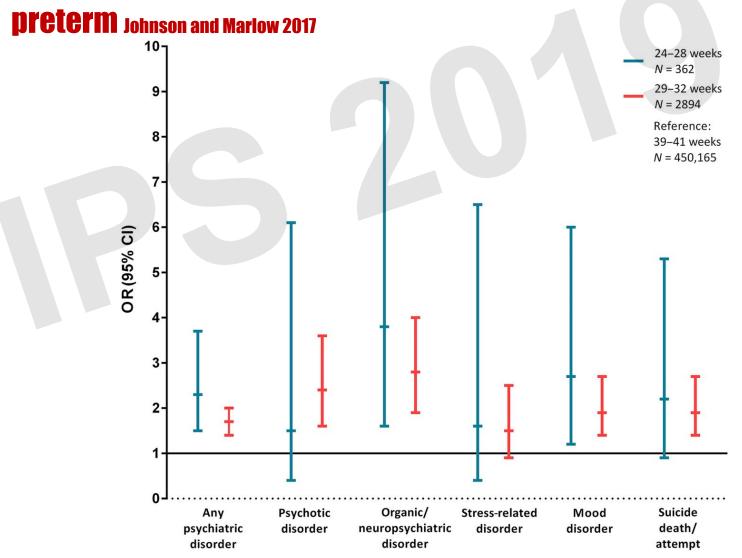

Preterm birth and total, externalizing and internalizing problems in

adulthood Pyhälä et al Pediatrics 2017;139:e20162690

Psychiatric morbidity in adolescents and young adults born very

Summary

- Increasing number of preterm survivors are entering the general population pool
- The majority will live long and healthy lives
- However challenges related to post-discharge health risks are emerging
- Close collaboration between neonatologists, paediatricians and adult specialists is increasingly warranted

Imperial College London

Neonatal Update 2019 "the science of newborn care"

25th - 29th November 2019 at BMA House, Tavistock Square, London, UK

Director: Professor Neena Modi, Co-director Dr Vimal Vasu

The Neonatal Update: "the science of newborn care" has an international reputation for delivering a unique and innovative programme that combines cutting-edge science with state-of-the-art clinical practice. The speakers are global leaders in their field and will take you into the future of newborn care. You will be stimulated and inspired, as well as educated and informed.

"A life changing experience! This is a wonderful conference, excellently organised with a touch of class. This is so much intellectual stimulation. I can't wait to register for and attend the next one" A previous delegate.

Young Investigator Awards

Two awards are available for outstanding young investigators to present a resumé of their research achievements and discuss the relevance of their past and future work to neonatal medicine. The award includes travel, accommodation and registration fee.

Registrations opening shortly at:
